

VANA — FINAL EOD CLOSURE

Maival + Mangrove Intelligence → Single Working Runtime

Combined execution command: G1 → G2 → G3 → G4 → Rhugved/Rahil UI → Deployment

TODAY'S OBJECTIVE

Turn the already-proven pieces into one reproducible, live runtime. No substitute datasets. No hard-coded results. No silent semantic changes.

TARGET: ONE OPERATING SYSTEM SLICE, NOT SIX SEPARATE DEMOS

1. WHAT MUST BE TRUE AT EOD

Runtime proof, not a collection of status messages.

REAL SOURCES

Open-Meteo • SAMACHAR • verified supporting data

G1

Canonical record • ID • timestamp • provenance

G2

Live context + decision • G-71 fixed

G4

Governance • outcome • ABSTAIN preserved

UI

Rhugved/Rahil displays live backend truth

DEPLOY

Single startup • env • ports • DB • health

2. COMMAND STRUCTURE

One delivery lead + one independent acceptance authority.

3. DATA SCOPE

Use proven real data. Explicitly label what is not proven.

OPEN-METEO — 6 REGIONS

Thane Creek • Mumbai • Navi Mumbai • Vasai • Thane • Maval
6/6 canonical records independently verified.

SAMACHAR

SMR-Z01-EXT-SAMACHAR-OBS001
G1 POST 201 + GET 200; round-trip verified.

MARINE / GIS / GOUDHA

Use only where actual datasets are available and verified. Missing data stays unresolved.

PHYSICAL SENSORS

No live physical sensor reading is proven. Do not fabricate measurements.

PRIMARY DEMO: MAVAL + MANGROVE INTELLIGENCE

4. GROUP 1 — SANSKAR + RUKAYYA + KAVY

Close source → canonical record and hand the exact live contract downstream.

SANSKAR — EXECUTE

- Live :8013 verification
- Regional/Maval records
- POST 201 → canonical_record_id → GET 200
- Capture API evidence
- No fabricated IDs

RUKAYYA — SOURCE / DB

- SAMACHAR + production DB
- Preserve source/provenance
- Coordinate authoritative geography
- No substitute GEO or source data

KAVY — VERIFY

- V2.2 contract
- Persistence + geography
- Timestamp + provenance
- Independent POST/GET review

G1 EXIT GATE

REAL SOURCE → G1 → CANONICAL RECORD → RETRIEVAL. Evidence must show observation_id, canonical_record_id, observed_at, source/provenance and geography linkage.

HANDOFF → G2: exact live request + response + canonical IDs + provenance

5. GROUP 2 — ARYA + PRITESH + PRATIK

Critical blocker: G-71 current live /resolve HTTP 400.

ARYA — SEMANTICS

- Confirm actual G1 fields consumed
- Scientific/spatial/temporal context
- Preserve abstention semantics
- No identity rewrite

PRITESH — LIVE RUNTIME

- Reproduce 400
- Fix regression
- Live /resolve
- Return actual decision envelope
- UI fallback is not proof

PRATIK — INTEGRATION

- Remove hardcoded/static fallbacks
- Ensure G2 does not call G4 internally
- Verify dynamic G1 → G2
- Regression test

G2 EXIT GATE

Live G1 canonical record → live G2 /resolve → machine-readable decision with context_id, ruling, eligibility, abstention, action_request, evidence/provenance, reason and timestamp semantics.

G-71 IS CLOSED ONLY WHEN LIVE G2 RETURNS THE ACTUAL EVALUATION.

6. GROUP 3 — HEMANTH + ARYA

Do not reopen proven intake work. Feed the verified source path.

HEMANTH — REAL DATA / INTAKE

- Maintain six verified Open-Meteo records
- Maintain SAMACHAR evidence
- Provide source payloads + provenance
- No physical sensor claim
- Future sensors use V2.2

ARYA — OBSERVATION CONTRACT

- Confirm V2.2 semantics
- Resolve any additional measurement mapping needed
- Preserve data/synthetic/quality meaning
- No semantic upgrade for presentation

G3 EXIT GATE

Maval Open-Meteo becomes the primary real demo input; SAMACHAR/mangrove intelligence is included where the downstream contract supports it.

7. GROUP 4 — MOHIT + EXISTING RUNTIME OWNERS

Govern the actual G2 result. Reuse existing evidence.

MOHIT — G4 / GOVERNANCE

- Consume actual G2 response
- Preserve ruling + eligibility + context_id
- ALLOW / DENY / ABSTAIN
- Verify noop / NOT EXECUTED
- Expose evidence to UI

EXISTING G4 EVIDENCE — REUSE

- Health / heartbeat
- authorised + unauthorised execution
- replay equivalence
- trace → ledger linkage
- restart recovery

G4 EXIT GATE

Actual G2 decision → G4 governance → governed outcome → trace/evidence. ABSTAIN + null context + false eligibility remains blocked/noop/not executed.

8. SAKSHI — GEOGRAPHY / GIS CLOSURE

Geography is an authority boundary, not a UI label.

MAVAL GEOGRAPHY

- Confirm authoritative Maval geo_id
- Validate coordinates → region
- Confirm mangrove spatial context
- Resolve missing IDs through authority, not substitution

COORDINATION

- Sakshi ↔ Kavy: schema/geo mapping
- Sakshi ↔ Arya: context applicability
- Sakshi ↔ Vijay: operational status
- Sakshi ↔ Rhugved/Rahil: verified map display

EXIT GATE

Authoritative geography is identified, traceable and represented correctly in the runtime and UI.

9. RAHIL/RHUGVED — CONTROL CENTER

Live API responses only. UI reports truth; it does not create it.

OBSERVATION

Source • observation_id
Location • timestamp
Measurement • status

CANONICAL / CONTEXT

canonical_record_id
context_id
Scientific/spatial context
evidence state

DECISION / GOVERNANCE

ruling • eligibility
governance checks
outcome • execution
ABSTAIN / NOT EXECUTED

LIVE DATA RULE

No hard-coded observations, decisions, outcomes, dataset status or lineage identifiers. Refresh/re-run must reflect actual backend responses.

MANGROVE INTELLIGENCE — MAVAL → later expand to Forest Intelligence

10. VIJAY + HEMANTH — SINGLE RUNTIME & DEPLOYMENT

The operational handover that turns multiple repos into one reproducible system.

SERVICES / ARCHITECTURE

Inventory G1/G2/G3/G4/UI + dependencies.

ENVIRONMENT

One documented env contract; no secrets in repo.

DB / STORAGE

MasterDB + bucket/evidence persistence requirements.

REPOSITORIES

Exact repo, branch/commit and access for blackholeinfiverse110@gmail.com.

PORTS

Record every required port; remove localhost-only assumptions.

STARTUP

One clean startup path from rebuild to running system.

HEALTH

Health + verification endpoints for required services.

DEPLOYMENT

Coordinate with Alay: VM, Docker, DNS, ports, final deployment.

VIJAY OWNS SINGLE-RUNTIME HANDOVER • HEMANTH SUPPORTS INTEGRATION PACKAGING • ALAY DEPLOYS

11. COORDINATION MAP

Parallel work. Explicit handoffs. No duplicate ownership.

Sanskar ↔ Rukayya

G1 source ingestion + production data

Sanskar ↔ Kavy

POST/GET evidence + persistence

Rukayya ↔ Sakshi

SAMACHAR geography / authoritative GEO

Kavy ↔ Arya

V2.2 fields → G2 semantics

Hemanth ↔ Sanskar

regional/source payloads → G1

Arya ↔ Pritesh

G2 semantics → live runtime

Pritesh ↔ Pratik

G-71 regression + dynamic integration

G2 ↔ Mohit

actual decision → G4

Mohit ↔ Rahil/Rhugved

governance response → UI

Ansh ↔ ALL

trace continuity + acceptance

Vijay ↔ ALL

integration blockers + readiness

Vijay ↔ Alay

deployment / VM / DNS / ports

12. 2–3 DAY EXECUTION SEQUENCE

Fast, parallel, evidence-driven.

DAY 1 — CLOSE BLOCKERS

G1 final evidence + geography
G-71 fix + live G2 response
Lock source contracts
Package single runtime

DAY 2 — INTEGRATE

G2 → G4 live lineage
Rahil/Rhugved binds live APIs
Startup/env/DB/health
Deploy candidate + smoke test

DAY 3 — PROVE / HANDOVER

Repeat E2E
Failure + ABSTAIN tests
Screenshots + logs + API samples
Demo + handover

EXECUTION ORDER

Learn → Build → Integrate → Test → Document → Handover. Work in parallel; wait only on explicit dependencies.

After handover, new work becomes backlog. No silent contract or governance changes.

13. FINAL E2E DEMO PATH

One real observation proves the entire system.

DEMO EVIDENCE

Source payload → G1 POST/GET → G2 live response → G4 response → UI screenshot → trace/log/API evidence. Same IDs and timestamps across the chain.

PRIMARY DEMO: MAVAL + MANGROVE INTELLIGENCE

14. FINAL ACCEPTANCE GATE

Vijay signs operational handover. Ansh signs evidence acceptance.

- ☐ Real source identified and accessible
- ☐ Identity + timestamp + provenance preserved
- ☐ G2 live /resolve returns actual evaluation
- ☐ G4 consumes actual G2 result
- ☐ UI consumes live backend; no hard-coding
- ☐ Single startup / ports / env / DB documented
- ☐ Deployment proven with exact commit/version
- ☐ Focused code packet + REVIEW_PACKET complete
- ☐ G1 canonical record retrievable
- ☐ All required datasets explicitly statused
- ☐ G-71 closed + regression-tested
- ☐ Governance / ABSTAIN semantics preserved
- ☐ Maval geography verified
- ☐ Health + verification endpoints documented
- ☐ Screenshots + logs + API samples captured
- ☐ Developer can reconstruct runtime with zero prior context

VIJAY — OPERATIONALLY READY

ANSH — EVIDENCE ACCEPTED

FINAL COMMAND

Close the real data path.

Fix G-71.

Connect G4.

Bind Rhugved/Rahil UI.

Package one runtime.

Deploy.

Prove it end-to-end.

MAVAL + MANGROVES FIRST → FOREST INTELLIGENCE NEXT

No fabricated data. No silent semantic changes. No dashboard authority.
